/ Search

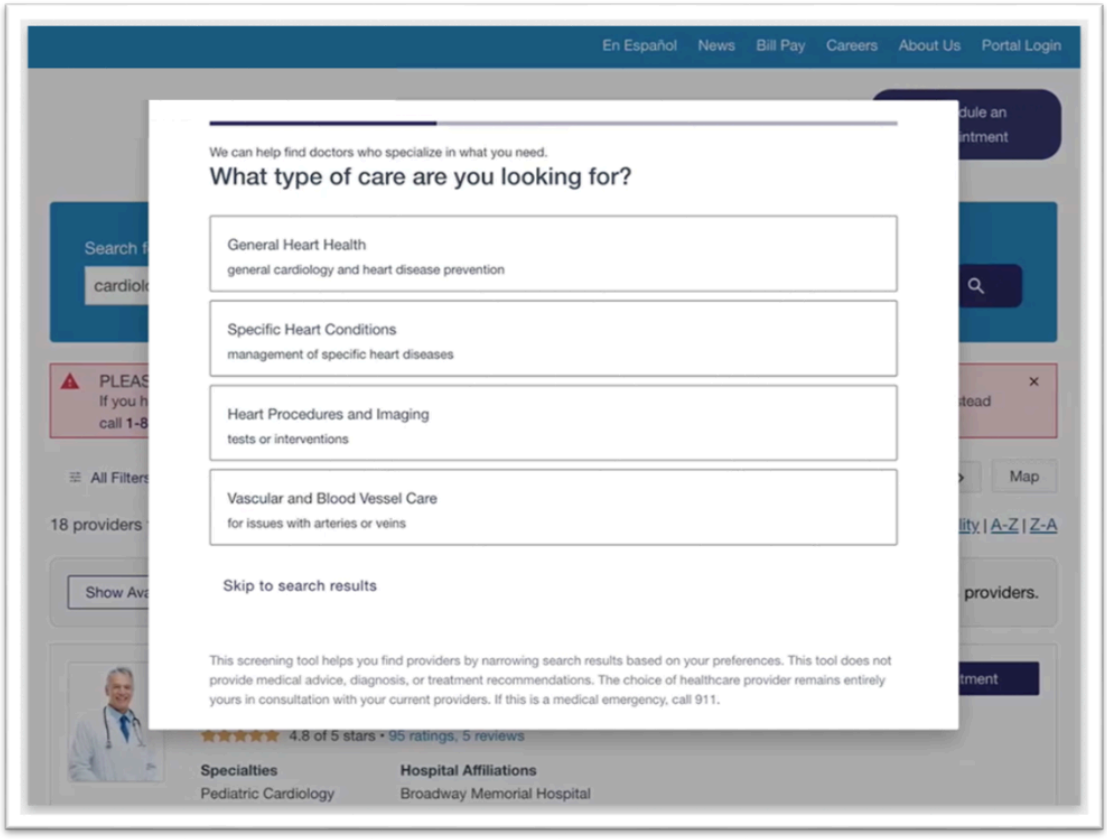

March 4, 2026. Generally Available: Patient Search Refiner In Search & Search API

Guide patients to the right care by understanding their needs upfront and delivering refined results to help streamline their search. The Patient Search Refiner enhances the accuracy of patient-to-provider matches, ensuring patients book appointments with the most suitable provider for their needs.

- **Optimized care journey:** When searching for a supported specialty, patients receive up to three targeted follow-up questions to refine their results and navigate to the most appropriate care.
- **Customizable:** Health systems can choose which specialties trigger the patient search refiner.
- **Seamless navigation:** Patients have the ability to bypass the flow entirely or navigate back to modify their answers.
- **Optimized result thresholds:** To ensure every search is high-value, the patient search refiner only activates when three or more provider matches are available—guaranteeing patients always have a robust selection of care options to choose from.

- **Expanded availability:** This feature is available to both Provider Directory and API-only customers.

If you would like to enable the patient search refiner feature, please reach out to **kyruussupport@revspringinc.com** or your customer success partner.

For more product updates, visit the Release Notes section of the Kyruus Health Help Center.

Support is available Monday to Friday from 9 AM - 9 PM (Eastern)
