March 10, 2026. Enhancing Patient Care Navigation with Value-Add Programs

Provide patients with more comprehensive care options by seamlessly integrating third-party partnerships and value add programs into search results for a more streamlined path to care. Learn more here.

- **Expanded care accessibility:** Bridge the gap between patient intent and comprehensive care delivery. Integrate supplemental services—such as specialty medications, treatments, lab testing, and on-demand services—directly into the search journey.
- **Streamlined patient experience:** Accelerate the path to care by surfacing alternative programs that relate specifically to the patient's search query.
- **Partner integration:** Easily promote your strategic healthcare partnerships within the search flow, providing a centralized care experience.

If you would like to utilize value add programs, please reach out to kyruussupport@revspringinc.com or your customer success partner.

March 12, 2026. Updated Hematologic Pathology Specialty Label

We have updated the specialty label "**Hematologic Pathology**" to "**Hematopathology**" to align with professional standards of the American Board of Pathology, as well as available fellowship programs.

- **Seamless Transition:** Affected providers have been updated automatically.
- **Persistent Search:** The former label remains available as an alias for easy discovery.

This update has been deployed for all customers.

March 12, 2026. Sending Discrete Fields to Athena – Patient Insurance

We now support sending patient's primary insurance details directly into Athena's discrete insurance fields. While this functionality is already available for our Epic users, we've now extended these same capabilities to the Athena platform.

Why This Matters

- **Cleaner Data Entry:** Details are mapped to specific fields in the patient chart. Previously, this information was included in appointment notes.
- **Primary Insurance Creation:** This update is designed to populate insurance information only if no insurance currently exists on the patient's file in Athena.
- **New Insurance Records:** When an appointment is booked, the insurance details create a new insurance record within Athena. This process is additive—it will not remove or overwrite any existing insurance information already in the patient's profile.

This is an integration handled by our team, requiring no configuration changes on your end. If you're interested please reach out to your Customer Success Partner or kyruussupport@revspringinc.com so we can ensure your registration form is using the required updated insurance fields.

For more product updates, visit the Release Notes section of the Kyruus Health Help Center.

Support is available Monday to Friday from 9 AM - 9 PM (Eastern)
