Kyruus Health Product Updates

The following product updates were released on or before January 29, 2026.

/ Search

Jan 27, 2026. Generally Available: Whitelisted AI Web Crawlers

To maximize visibility in AI-generated search results, we have advanced our Generative Engine Optimization (GEO) strategy. We updated our robots.txt configurations and expanded our allowlist of authorized web crawlers. This ensures our provider and location data is seamlessly integrated into synthesized AI answers.

The following agents have been added:

- GPTBot
- OAI-SearchBot
- PerplexityBot
- ClaudeBot
- Meta-ExternalFetcher

These agents will join our current allowlist of domain crawlers, including:

- Googlebot
- Bingbot
- Slurp

- DuckDuckBot

These new crawlers are enabled by default. However, if you have already configured a custom list of permitted crawlers, your existing selections will be respected.

If you would like to remove any of these agents or add any additional agents, please reach out to support@kyruushealth.com or your customer success partner.

Jan 27, 2026. Generally Available: Search Input Clear ("X") Functionality

To improve usability within the search experience, we have added a dynamic "clear" icon now within the search input field. Users can now reset their search queries with a single click, streamlining the process of exploring different providers and specialties.

- As soon as users begin typing in the search bar, an "X" will appear.
- To start a fresh search, users can just select the "X" to clear the input instantly. No more manual deleting—just faster results.

This change is automatic for Search customers. Please contact your Customer Success Partner or reach out to support@kyruushealth.com with any questions.

For more product updates, visit the Release Notes section of the Kyruus Health Help Center.

Support is available Monday to Friday from 9 AM - 9 PM (Eastern)
