Kyruus Health Product Updates

/ Search & Cost

March 18, 2026. Coming Soon to UAT: Enhanced Search Cards

To support a more intuitive search journey, we are replacing our current search cards with an optimized, streamlined layout. Built on proven design best practices, this update reduces cognitive load and eliminates visual noise—enabling your members to make faster, more confident care decisions.

Key Changes & Benefits:

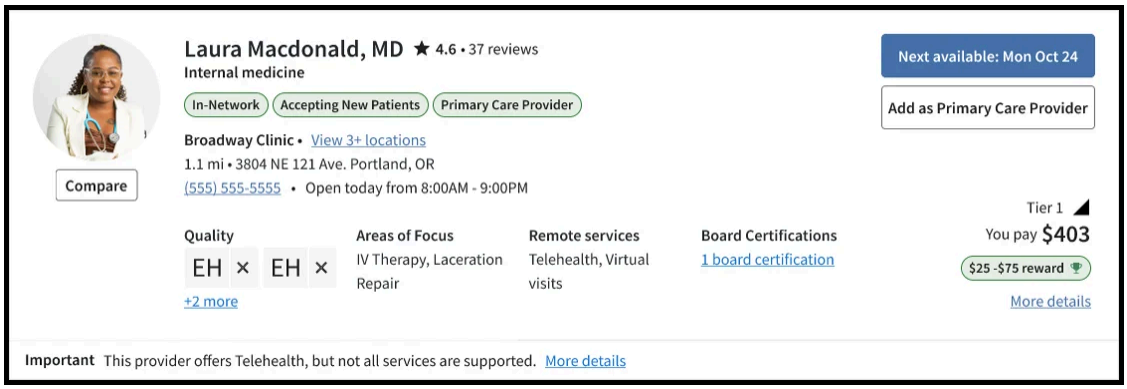

- **Headers:** Critical information is now prioritized in the header to ensure maximum clarity. Bold, high-contrast badges help members quickly distinguish important provider attributes.
- **Attributes**: Card layouts are simplified to show a maximum of four attributes, automatically hiding empty fields to reduce visual noise. Displayed attributes will remain customizable.
- **Calls-to-Action:** The layout of critical hyperlinks and buttons are optimized to promote the most frequent member actions, including call to book, book now, select PCP, and compare/save providers.
- **Cost Experience:** For Cost customers, cost search results now use the enhanced card layout, simplifying the display of rewards and pricing

data.

This upgraded experience will be **automatically enabled for all customers in UAT on March 31st**. It will be auto-on for all customers in Production on April 28th.

There is no configuration required. If you would like to change which attributes to display on search cards, please reach out to your Kyruus customer support team.

Detailed enhancement documentation and enablement materials will be available by March 31st. Leverage our templated communication plan here to surface these changes to your members and internal organization.

/ General Announcement

March 19, 2026. CMS is Changing the Rules of Transparency. Are You Ready?

For years, "Transparency in Coverage" has felt like a data-filing exercise—meeting CMS mandates by posting massive machine-readable files. But CMS's latest proposed updates signal a major shift. The industry is moving away from mere disclosure and toward **Decision-Ready Healthcare.**

In our latest blog post, we break down why the "data available" gap is closing and what health plans need to do to turn compliance into a strategic advantage.

What's Changing in the CMS Proposal? CMS is aiming to reduce the noise and increase the signal. Key updates include:

- **Eliminating "Ghost Rates":** Removing clinically implausible rate combinations that confuse members and undermine trust.

- **Network-Level Reporting:** Reducing repetitive data by organizing around networks rather than individual plans.
- **Improved Findability:** Making it easier for members, employers, and developers to actually locate and use transparency assets.
